                                                                                          CC The invention provides a method for detecting a polymorphism linked to a consensated with familial dysautonomia (FD). This involves detecting a disruptive mutation in a gene encoding the IkappaB kinase-complex-cc associated protein (IXAP) on chromosome 931. Sequence analysis of the IXAP-encoding gene showed, in chromosome 931. Sequence analysis of the CT to C transition in position of of the donor splice site of intron 20. This mutation (2507-67 to C) results in the generation of an IXAP mRNA in which exon 20 is spliced out along with intron 20. Sequence analysis of the IXAP gene of individuals hereozygous for the FD chromosome with the most common minor haplotype (minor 2) showed a G to C transversion of a rucleotide 2390 in exon 19 of the reported IXAP cDNA, resulting in an CC kinase phosphorylation site. The present sequence is a primer that can be used in a claimed method for detecting a disruption of a consensus Ser/Thr CC kinase phosphorylation site. The present sequence is a primer that can be used in a claimed method for detecting a disruption with the IXAP gene, using single-strand conformational polymorphism (SSCP) analysis. CC primer given in ABN84785 yielded a 244 bp fragment. In a family with the probands homozygous for the major haplotype, all affected individuals were homoallelic for 2507+6C to C and all the parents were heterozygous. In families with probands heterozygous for the major and minor a FD component and the proband were heterozygous for R656p and the other parent and the proband were heterozygous for R656p and the other parents were heterozygous for the major FD haplotype showed that 100% of the probands homozygous for the major FD haplotype showed that PD and were homozygous for the FD haplotype showed that PD and the other probands were homozygous for the motor of the probands had FD and the probands had probands had FD and were homozygous for the FD haplotype showed that FD and the probands had probands had FD and were homozygous for the FD component for C condetion. Study of th
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Detecting a polymorphism in a gene encoding the lkappaB kinase-complexassociated protein is used to diagnose and identify carriers of familial
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Pamilial dysautonomia; Riley-Day syndrome; hereditary sensory neuropathy III; human; carrier; diagnosis; IkappaB kinase-complex associated protein; primer; SSCP; single-strand conformational polymorphism; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim

The present invention relates to methods and compositions useful for CC detecting mutations which cause Familial Dysautonomia (FD, Riley-Day Syndrome, Hereditary Sensory and Autonomic Neuropathy Type III) (OMIM C223900]. It was found that mutations in the IKBRAP gene (see ABQ80565) are associated with FD. The mutation associated with the major haplotype of FD, FD1 mutation, is a base pair (bp) mutation, where the thymine nucleotide located at bp 6 of intro 20 in the IKBRAP gene is replaced with a cytosine. This results in skipping of exon 20 in the mRNA from FD patients, although they continue to express varying levels of wild-type message in a tissue-specific manner. The mutation associated with the minor haplotype, FD2 mutation, is a bp mutation, where the guantine nucleotide at bp 2397 (bp 73 of exon 19) is replaced with a cytosine. This bp mutation causes an arginine to proline missense mutation (R636P) in the IKBRAP protein, which is predicted to disrupt a potential for identifying a subject with PD And for rapid carrier screening. The IKBRAP gene contains 37 exons and maps to chromosome 9431. Note: the present CC sequence was not shown in the specification, but was derived from the XXX
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      片
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                δ

The present invention relates to methods and compositions useful for CC detecting mutations which cause Familial Dysautonomia (FD, Riley-Day Syndrome, Hereditary Sensory and Autonomic Neuropathy Type III] [OMIM CC 23390]. It was found that mutations in the IKBKAP gene (see ABQ80565) CC are associated with FD. The mutation associated with the major haplotype CC properties. This results in skiping of exon 20 in the mRNA from FD with a cytosine. This results in skiping of exon 20 in the mRNA from FD CC patients, although they continue to express varying levels of wild-type CC message in a tissue-specific manner. The mutation associated with the number haplotype, FD2 mutation, is a by mutation associated with the CC muleotide at bp 237 (bp 73 of exon 19) is replaced with a cytosine. This bp mutation causes an arginine to proline missense mutation (R696P) CC in the IKBKAP procein, which is predicted to disrupt a potential CC phosphorylation site. The IKBKAP mucleic acid sequences are useful for identifying a subject with FD and for rapid carrier screening. The IKBKAP gene contains 37 exons and maps to chromosome 5431. Note: the present sequence was not shown in the specification, but was derived from the contains and shown in the specification, but was derived from the contains and south sequence given in Fig 6
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 밁

Š
                     The present invention relates to methods and compositions useful for detecting mutations which cause Pamilial Dysautonomia (PD, Riley-Day CC syndrome, Hereditary Sensory and Autonomic Neuropathy Type III) [OMIM CC 223900]. It was found that mutations in the IKBKAP gene (see ABG80565) CC are associated with FD. The mutation associated with the major haplotype CC of FD, FD1 mutation, is a base pair (bp) mutation, where the thymine CC nucleotide located at bp 6 of intron 20 in the IKBKAP gene is replaced CC with a cytosine. This results in skipping of exon 20 in the mRNA from FD patients, although they continue to express varying levels of wild-type CC message in a tissue-specific manner. The mutation associated with the CC mucleotide at bp 2397 (bp 73 of exon 19) is replaced with a cytosine. CC mucleotide at bp 2397 (bp 73 of exon 19) is replaced with a cytosine. CC mucleotide at bp 2397 (bp 73 of exon 19) is replaced with a cytosine. CC in the IKBKAP protein, which is predicted to disrupt a potential CC phosphorylation site. The IKBKAP nucleic acid sequences are useful for CC identifying a subject with FD and for rapid carrier screening. The IKBKAP gene contains 37 exons and maps to chromosome 9931. Note: the present CC sequence was not shown in the specification, but was derived from the KBKAP sequence given in Fig 6
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Best Local Similarity

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Ş
                                                                                             The present invention relates to methods and compositions useful for detecting mutations which cause Familial Dysautonomia (FD, Riley-Day Syndrome, Hereditary Sensory and Autonomic Neuropathy Type III) [OMIM C2 223900]. It was found that mutations in the IKBKAP gene (the present CC thymine nucleotide located with FD. The mutation associated with the major chype of FD, FDI mutation, is a base pair (bp) mutation, where the CC thymine nucleotide located at bp 6 of intron 20 in the IKBKAP gene is creplaced with a cytosine. This results in skipping of exon 20 in the mRNA CC from FD patients, although they continue to express varying levels of CC with the minor haplotype, FDZ mutation, is a bp mutation associated with the minor haplotype, FDZ mutation, is a bp mutation, where the CC guanine nucleotide at bp 2397 (bp 73 of exon 19) is replaced with a CC guanine nucleotide at bp 2397 (bp 73 of exon 19) is replaced with a CC mutation (R696P) in the IKBKAP protein, which is predicted to disrupt a CC control of the CKBKAP protein, which is predicted to disrupt a CC useful for identifying a subject with FD and for rapid carrier screening. The IKBKAP gene contains 37 exons and maps to chromosome 9q31
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match

(I) have cytostatic activity and can be used in vaccine production. (I) can be used for stimulating and/or expanding T cells specific for a tumour protein on contact with the T cells. They are also useful for inhibiting the development of cancer in a patient. (I) can be used as probes or primers for nucleic acid hybridisation, for preparing mutant species primers, or primers for use in genetic constructions. (I) can be used in the diagnosis of a colon tumour

                                                                                                                                                                                                                                                                                                                                    The invention relates to Enterococcus faecalis polynucleotides and polypeptides. The invention also relates to a recombinant expression vector comprising a polynucleotide operably linked to a transcription regulatory element, a cell comprising a recombinant vector, a method for producing an E. faecalis polypeptide, an isolated nucleic acid comprising a sequence not given in the specification, a recombinant vector. The polynucleotides can be used to detect the presence of E. faecalis in a sample. The sequences are useful for preparing a composition for diagnosing or treating Enterococcus faecalis infection. This sequence represents an E. faecalis polynucleotide of the invention.

The prokaryotes used are Escherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae, coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae, components aeruginosa and Enterococcus faccalis. The invention is also cuseful for the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used to identify components used in proliferation, to express these proteins, and to obtain components antibiotic capable of binding to the expressed proteins. The proteins can be used to screen compounds in rational drug discovery programmes. The antisense nucleic acid sequence is also useful to screen for homologous can cleic acids which are required for cell proliferation in a wide variety of organisms. The present sequence encodes an essential prokaryotic cellular proliferation protein. Note: The sequence data for this patent colid not form narr of the protein. Note: The sequence and shall be a controled to the sequence of the sequence and the secuence data for this patent cold and of the protein and the sequence and the sequence of the sequence and the sequence and the sequence and the sequence data for this patent cold and of the protein sequence and the sequence are controled to the sequence and

The DNA and protein sequences of the invention are useful for diagnosing, imaging and treating a patient with endometrial cancer. The present DNA sequence represents a human endometrial specific gene of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  cc sequences. (I) is useful as hybridisation probes, polymerase Chain creation (PCR) primers, oligomers, and for chromosome and gene mapping, cc and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed cc genes. (I) is useful in gene therapy techniques to restore normal cc activity of (II) or to treat disease states involving (II). (II) is considered antibodies against it, detecting or quantitating a conjypeptide in tissue, as molecular weight markers and as a food conjugated in the shifting partners are useful in medical imaging confistes expressing (II), (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The cc diagnostics, forensics, gene mapping, identification of mutations cresponsible for genetic disorders or other traits to assess biodiversity and no produce other types of data and products dependent on DNA and coding sequences of the invention. Note: The sequence data for this content did not appear in the printed specification, but was obtained in celectronic format directly from WIPO at fig., wipo, int/pub/published_pct_sequences

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          SACOS 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CC sequences. (I) is useful as hybridisation probes, polymerase chain CC reaction (PCR) primers, oligomers, and for chromosome and gene mapping, CC and in recombinant production of [II]. The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed CC genes. (I) is useful in gene therapy techniques to restore mormal CC activity of [II] or to treat disease states involving [II]. (II) is CC useful for generating antibodies against it, detecting or quantitating a CC polypeptide in tissue, as molecular weight markers and as a food CC supplement. (II) and its binding partners are useful in medical imaging CC involving aberrant protein expression or biological activity. The CC involving aberrant protein expression or biological activity. The CC diagnostics, forensics, gene mapping, identification of mutations CC responsible for genetic disorders or other traits to assess biodiversity CC and to produce other types of data and products dependent on DNA and CC coding sequences. AAS64197-AAS94564 represent novel human diagnostic patent did not appear in the printed specification, but was obtained in CC electronic format directly from WIPO at the content of the content of the printed specification, but was obtained in the content of the content of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               cc and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed compens. (I) is useful in gene therapy techniques to restore normal cativity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a colypeptide in tissue, as molecular weight markers and as a food as complement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The colypeptide and polynucleotide sequences have applications in composities, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and coding sequences of the invention. Note: The sequence data for this compatent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at fig.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

                The invention relates to a method for producing L-pipecolic acid. The method comprises reducing delta-1-piperidine-6-carboxylic acid with pyrrolidine-5-carboxylate reductaes. A recombinant Escherichia coli or coryneform bacterium that can express a gene encoding lysine-6-aminotransferase is cultured in an L-lysine-containing medium in order produce L-pipecolic acid. L-pipecolic acid may be used as a produce L-pipecolic acid. L-pipecolic acid may be used as a
                                                                                                                                                               Producing L-pipecolic acid for use as a pharmaceutical raw material comprises reducing delta-1-piperidine-6-carboxylic acid with pyrrol 5-carboxylate reductase particularly in recombinant bacterium.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       L-pipecolic acid production; delta-1-piperidine-6-carboxylic acipyrrolidine-5-carboxylate reductase; lysine-6-aminotransferase;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 1944

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ADE72674 standard; DNA; 2620
                                                                                                                                                                                                                 The invention comprises the amino acid and DNA sequences of human endometrial specific genes and proteins. The DNA and protein sequences the invention are useful for diagnosing, imaging and treating a patient with endometrial cancer. The present DNA sequence represents a human endometrial specific gene of the invention.
                                                                                                                                                                                                                                                                                                            Nucleic acid molecules and polypeptides useful for diagnosing and treating endometrial cancer and non-cancerous disease states in endometrial.

The DNA and protein sequences of the invention are useful for diagnosing, imaging and treating a patient with endometrial cancer. The present DNA sequence represents a human endometrial specific gene of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Nucleic acid molecules and polypeptides useful for diagnosing treating endometrial cancer and non-cancerous disease states i endometrial.

This gene, designated GUT2 or YIL155C, codes for a mitochondrial glycerol -3-phosphate dehydrogenase (G3PDH, see AAMS/327) that catalyses the conversion of dihydroxyacetone phosphate to glycerol-3-phosphate. The invention provides recombinant organisms that express G3PDH and/or glycerol-3-phosphatase (G3P) (see also AAMS/324-32) useful for the production of glycerol from a variety of C-sources. A host cell is preferably transformed with a cassette containing a G3PDH gene and/or a G3P gene and then cultured in the presence of a mono-, oligo-,
                                                                                                                                     Fermentative production of glycerol using recombinant host - containing genes for glycerol-3-phosphate dehydrogenase and-or glycerol-3-phosphatase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Glycerol-3-phosphate

The DNA and protein sequences the invention are useful for diagnosing, imaging and treating a patient with endometrial cancer. The present DNA sequence represents a human endometrial specific gene of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Nucleic acid molecules and polypeptides useful for diagnosing treating endometrial cancer and non-cancerous disease states endometrial.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Claim

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ពួកក្រុក និង
This DNA sequence includes the coding region of the gut2 gene encoding a mitochondrial glycerol-3-phosphate dehydrogenase (see AAW30682) of Saccharomyces sp. This enzyme catalyses the conversion of dihydroxyacetone phosphate to glycerol-3-phosphate. A claimed method for production of 1.3-propanediol (I) comprises culturing a microorganism transformed with a cassette containing at least 1 of the genes (see AAV42012-21) for glycerol-3-phosphate dehydrogenase, glycerol-3-phosphatese, glycerol-3-phosphate and 1.3-propanediol oxidoreductase (see AAW30676-85). Any of these genes not present on the cassette must be present endogenously. The enzyme sequences may include substitutions, deletions and additions provided activity is not altered. A single recombinant organism can now be used for production of (I) from inexpensive C-sources (contrast use of glycerol or dalbydroxyacetone) without causing pollution. (I) is a starting material for polyesters,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches
                                                                        The sequence is that of the GUTZ gene which encodes mitochondrial glycerol-3-phosphate dehydrogenase. It was used as part of a method of fermentative production of 1,3-propanediol (1,3-pd), using an organism comprising at least 1 gene encoding a dehydratase, is improved by inserting into the host a gene encoding protein X and culturing the transformant in presence of a carbon source (e.g. mono-, oligo- or polysaccharide or 1C substrate) convertible to 1,3-pd. 1,3-pd is a starting material for polyseters, polyurethanes and cyclic compounds. 1,3-pd can now be produced by a single recombinant organism from inexpensive carbon sources such as glucose (rather than costly glycerol or a single recombinant organism.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      polyurethanes and cyclic compounds
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            GUT2 gene;

                                                                          mitochondrial glycerol 3-phosphate dehydrogenase (G3PDH) which catalyses the conversion of dihydroxyacetone phosphate to glycerol 3 -phosphate. This is used to produce glycerol from a recombinant organism by transforming a suitable host cell with an expression cassette comprising either one or both of the genes encoding G3PDH and G3P, where the host cell has disruptions in either glycerol kinase or glycerol dehydrogenase endogenous genes to prevent their active expression. The transformed host cell is cultured with a carbon source and glycerol is recovered. Compounds derived from the glycerol biosynthetic pathway like 1.3-propanediol can also be produced. The method provides a rapid, in cosmetics, food, pharmaceuticals, lubricants, anti-freeze solutions, fat and oil industry etc. 1.3-propanediol is used for the production of polyester fibers and the manufacture of polyurethanes and cyclic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          GUT2; glycerol-3-phosphate dehydrogenase; FAD-dependent enzyme; EC 1.1.99.5; glycerol; recombinant organism; transformation; rul155C; glycerol biosynthetic pathway; expression cassette; 1-3 propanediol; pharmaceutical compound; antifreeze solution; lubricant; polyurethane cyclic compound; fat and oil industry; polyester fiber; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               GUT2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   AAX80613;

New NOVX treating obesity, polypeptides and nucleic acid molecules useful for preventing or NOVX-associated disorders, e.g. cancer, diabetes, infection or and in chromosome mapping, tissue typing or pharmacogenomics.

Example 51; SEQ ID NO 1083; 1880pp; English.

The invention relates to a novel isolated polypeptide (NOVX). A CC polypeptide of the invention has cytostatic, immunomodulator, neuroprotective; nootropic, anorectic, antidiabetic, antimicrobial, and CC antilipaemic activity, and may have a use in gene therapy, and as a CC vaccine. The polypeptides are encoded by NOVX polynucleotides comprising CC any of the 303 fully defined nucleotide sequences given in the CC specification. The polypeptide is useful in the manufacture of a CC medicament for treating a syndrome associated with a human disease. The CC polypeptide, polynucleotide and antibody are useful in diagnosing, CC treating or preventing NOVX-associated disorders, e.g. cancer, cachexia, CC Alzheimer's disease, Parkinson's disease, obesity, diabetes, infectious CC diseases, metabolic syndrome X or dyslipidaemias. The nucleic acids are typing, preventive medicine, and pharmacogenomics. The present sequence cC encodes a NOVX polypeptide of the invention.

New NOVX polypeptides and nucleic acid molecules useful for preventing treating NOVX-associated disorders, e.g. cancer, diabetes, infection or obesity, and in chromosome mapping, tissue typing or pharmacogenomics.

Example 51; SEQ ID NO 1089; 1880pp; English.

CC polypeptide of the invention has cytostatic, immunomodulator, CC neuroprotective, nootropic, anorectic, antidiabetic, antimicrobial, and CC antilipaemic activity, and may have a use in gene therapy, and as a CC vaccine. The polypeptides are encoded by NOVX polynucleotides comprising CC any of the 303 fully defined nucleotide sequences given in the CC specification. The polypeptide is useful in the manufacture of a CC medicament for treating a syndrome associated with a human disease. The CC polypeptide, polynucleotide and antibody are useful in disagnosing, creating or preventing NOVX-associated disorders, e.g. cancer, cachexia, CC Alzheimer's disease, Parkinson's disease, obseity, diabetes, infectious CC diseases, mateboolic syndrome X or dyslipidaemias. The nucleic acids are typing, preventive medicine, and pharmacogenomics. The present sequence CC encodes a NOVX polypeptide of the invention.

                              Human endometrial specific gene,
                                                                                                                                                                                                                                                                     The invention comprises the amino acid and DNA sequences of human endometrial specific genes and proteins. The DNA and protein sequences of the invention are useful for diagnosing, imaging and treating a patient with endometrial cancer. The present DNA sequence represents a human endometrial specific gene of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention comprises the amino acid and DNA sequences of human endometrial specific genes and proteins. The DNA and protein sequences of the invention are useful for diagnosing, imaging and treating a patient with endometrial cancer. The present DNA sequence represents a human endometrial specific gene of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           endometrial specific genes and proteins. The DNA and protein sequences of the invention are useful for diagnosing, imaging and treating a patient with endometrial cancer. The present DNA sequence represents a human endometrial specific gene of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The

The current sequence is that of the human KEMAP CDNA of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 3858 BP; 972 A; 961 C; 989 G; 936 T; 0

The DNA and protein sequences of the invention are useful for diagnosing, imaging and treating a patient with endometrial cancer. The present DNA sequence represents a human endometrial specific gene of the invention.

                     The invention comprises the amino acid and DNA sequences of human endometrial specific genes and proteins. The DNA and protein sequences of the invention are useful for diagnosing, imaging and treating a patient with endometrial cancer. The present DNA sequence represents a human endometrial specific gene of the invention.
                                                                                                                                                                                                                             Nucleic acid molecules and polypeptides useful treating endometrial cancer and non-cancerous endometrial.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             endometrial specific genes and proteins. The DNA and protein sequences the invention are useful for diagnosing, imaging and treating a patient with endometrial cancer. The present DNA sequence represents a human endometrial specific gene of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Nucleic acid molecules and polypeptides useful for diagnosing treating endometrial cancer and non-cancerous disease states endometrial.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          23-DEC-2002; 2002WO-US041612.

```

The invention describes an isolated polypeptide chosen from secreted proteins (I), SECP 1-54. (I) and the polynucleotide encoding it (II)

are

Nucleic acid molecules and polypeptides useful for diagnosing and treating endometrial cancer and non-cancerous disease states in endometrial.

2003-577666/54.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    88888888888888888888888888888888888888
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         CC useful for screening a compound for effectiveness as an agonist or conditions of (I) or compound that alters expression of (II). (I), the CC identified agonist and antagonist are useful for treating a disease or condition associated altered expression of functional SECP in a patient. CC An antibody specific to (I) is useful for detecting the presence of (I), CC purifying (I) from a sample and for diagnosing a condition or disease cc associated with expression of SECP in a subject or in a biological CC treatment and prevention of cell proliferative disorders (e.g. cancer keratosis, arteriosclerosis, atherosclerosis, cirrhosis, hepatitis and CC immunodeficiency syndrome (AIDS), adult respiratory distress syndrome, CC thyroiditis, Crohn's disease, demarkitis, diabetes, Graves' disease, CC systemic sclerosis, ulcerative colitis, diabetes, Graves' disease, CC systemic sclerosis, ulcerative colitis, haemodialysis, uveitis, viral, CC bacterial, fungal, parasitic, protozoal, helminihic infections and CC trauma), cardiovascular discorders (e.g. congestive heart failure, angina, hypertensive heart disease), neurological disorders (e.g. Alzheimer's and CC pick disease, Parkinson disease, multiple sclerosis, dementia, neuromuscular CC discorders, metabolic, endocrine and toxic myopathies, mentabolic, endocrine and toxic myopathies, mentabolic, endocrine and toxic myopathies, mental disorders, cell-lepsy, hypothyroidism, glaucoma, sensorineural hearing loss and CC cataract). (II) is useful for creating transgenic animals to model human cC disease and to detect and quantify gene expression in biopsied tissues in which expression of SECP is correlated with disease. Claim 1;

SEQ ID NO 112;

824pp; English

The invention comprises the amino acid and DNA sequences of human endometrial specific genes and proteins. The DNA and protein sequences the invention are useful for diagnosing, imaging and treating a patient with endometrial cancer. The present DNA sequence represents a human endometrial specific gene of the invention.

Novel human secreted proteins and polynucleotides for diagnosing, preventing or treating cell proliferative, autoimmune/inflammatory, cardiovascular, neurological and developmental disorders.
```

Claim 5; Page 224-225; 234pp; English.

The invention describes an isolated polypeptide chosen from secreted CC useful for screening a compound for effectiveness as an agonist or CC antagonist of (I) or compound that alters expression of (II). (I), the CC identified agonist and antagonist are useful for treating a disease or condition associated altered expression of functional SECP in a patient. An antibody specific to (I) is useful for detecting the presence of (I). CC purifying (I) from a sample and for diagnosing a condition or disease creatment and prevention of SECP in a subject or in a biological sample. (I) and (II) and modulators of (I) are useful for dategonesis, currhosis, arteriosclerosis, atherosclerosis, cirrhosis, hepatitis and psoriasis), autoimmune/inflammatory disorders (e.g. acquired communodeficiency syndrome (AIDS), adult respiratory distress syndrome, CC plomerulonephritis, arthritis, sclerosis, autoimmune thyroiditts, diabetes, Graves' disease, cypomerulonephritis, arthritis, sclerosterma, systemic lupus erythematosus, systemic sclerosis, ulcerative colitis, heamodialysis, uveitis; viral, cc bacterial, fungal, parasitic, protozoal, helminthic infections and creamant, cardiovascular disorders (e.g. angulared competency disease, multiple sclerosis, dementia, neuromuscular stroke, Huntington's disease, multiple sclerosis, dementia, neuromuscular colitorers, metabolic, endocrine and toxic myopathies, mental disorders, schizophrenic disorders, and developmental disorders (e.g. anaemia, cegilapsy, hypothyroidism, glaucoma, sensorineural hearing loss and cataract). (II) is useful for creating transgenic animals to model human codes a human secreted protein (SCEP)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to a novel method which comprises identifying a candidate p53 pathway-modulating agent. The human modifier (HM) polypeptides and polynucleotides of the invention are identified with the use of Drosophila melanogaster orthologues which are known to modify the p53 pathway. The human p53 protein normally functions as a central integrator of signals including DNA damage, hypoxia, nucleotide deprivation and oncogene activation. The HM molecules of the invention demonstrate cytostatic activity, whilst the method may be useful for identifying a candidate p53 pathway-modulating agent and modulating the p53 pathway in a cell, as well as during the diagnosis and treatment of an apoptotic, angiogenic or cell proliferation disorder, such as cancer. The current sequence is that of the LIG-1 membrane glycoprotein HM DNA contents.

The polypeptides are encoded by NOVX polynucleotides comprising any of the 303 fully defined nucleotide sequences given in the specification. The polypeptide is useful in the manufacture of a medicament for treating a syndrome associated with a human disease. The polypeptide, polynucleotide and antibody are useful in diagnosing, treating or preventing NOVX-associated disorders, e.g. cancer, cachexia, Alzheimer's disease, Parkinson's disease, obesity, diabetes, infectious diseases, metabolic syndrome x or dyslipidaemias. The nucleic acids are further used as hybridisation probes, in chromosome mapping, tissue typing, preventive medicine, and pharmacogenomics. The present sequence encodes a NOVX polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Alsobrook JP, Alvarez E, Anderson DM, Boldog FL, Casman SJ;

                                                                                                                                                                                                                                                                                                                                                          The present invention relates to new isolated proteins (NOVX) and their CC coding sequences (ABV99327-ABV99595 and ABP70049-ABP70149), where X is CC any number from 1 to 48. The NOVX proteins and coding sequences are CC useful in the manufacture of a medicament for treating a syndrome associated with a human disease, preferably a NOVX-associated disorder. CC The NOVX coding sequences and proteins are useful for treating, diabetes, or preventing or diagnosing disease, such as metabolic disorders, diabetes, CC chesity, infectious disease, anorexia, cancer-associated cachexia, CC cancer, neurodegenerative diseases, Alzheimer's disease, Parkinson's CC disease, immune disorders, heamatopoletic disorders, parkinson's CC disease, immune disorders, heamatopoletic disorders, cardiovascular CC disorders, fertility, bronchial asthma, AIDS, dyslipidemia, metabolic disorders associated with obseity, metabolic syndrome X or wasting CC disorders associated with chronic disease or various cancer. The NOVX CC coding sequences and proteins may also be used as targets for the dentification of small molecules that modulate or inhibit e.g. count dealing and angiogenesis, in gene therapy, in generation of the antibodies that bind immunospecifically to NOVX substances for use in the control of small angiogenesis, in gene therapy.
                                                                                                                                                                                                                                             Query Match

                                                                                                                                                                                                                                                                                       antilipaemic activity, and may have a use in gene therapy, and as a vaccine. The polypeptides are encoded by NOVX polynucleotides comprising any of the 303 fully defined nucleotide sequences given in the medicament for treating a syndrome associated with a human disease. The polypeptide, polynucleotide and antibody are useful in diagnosing, treating or preventing NOVX-associated disorders, e.g. cancer, cachexia, Alzheimer's disease, Parkinson's disease, obesity, diabetes, infectious diseases, metabolic syndrome xor dyslipidaemias. The nucleic acids are tryping, preventive medicine, and pharmacogenomics. The present sequence encodes a NOVX polypeptide of the invention.

The DNA and protein sequence the invention are useful for diagnosing, imaging and treating a patie with endometrial cancer. The present DNA sequence represents a human endometrial specific gene of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 endometrial specific genes and proteins. The DNA and protein sequences the invention are useful for diagnosing, imaging and treating a patient with endometrial cancer. The present DNA sequence represents a human endometrial specific gene of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Nucleic acid molecules and presenting endometrial cancer endometrial.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim 1; SEQ ID NO 128; 824pp; English
                                                              The invention comprises the amino acid and DNA sequences of human endometrial specific genes and proteins. The DNA and protein sequences the invention are useful for diagnosing, imaging and treating a patient with endometrial cancer. The present DNA sequence represents a human endometrial specific gene of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 5204 BP; 1171 A; 1436 C; 1476 G; 1120 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     WPI; 2003-577666/54

The DNA and protein sequences of the invention are useful for diagnosing, imaging and treating a patient with endometrial cancer. The present DNA sequence represents a human endometrial specific gene of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to novel polynucleotide and polypeptides for treating psoriasis or a sequence having at least 80% identity to the above sequences. The nucleic acid is useful for preparing a composition for diagnosing or treating psoriasis in a mammal. This sequence corresponds to one of the polynucleotides of the invention.

                                                                                                                                                                           The invention comprises the amino acid and DNA sequences of human endometrial specific genes and proteins. The DNA and protein sequences the invention are useful for diagnosing, imaging and treating a patient with endometrial cancer. The present DNA sequence represents a human endometrial specific gene of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention comprises the amino acid and DNA sequences of human endometrial specific genes and proteins. The DNA and protein sequences the invention are useful for diagnosing, imaging and treating a patient with endometrial cancer. The present DNA sequence represents a human endometrial specific gene of the invention.

                                                                                                                                           The invention comprises the amino acid and DNA sequences of human endometrial specific genes and proteins. The DNA and protein sequences of the invention are useful for diagnosing, imaging and treating a patient with endometrial cancer. The present DNA sequence represents a human endometrial specific gene of the invention.
